Online Coding School for Kids Offers Free & Reduced Price Classes During School Closures

CodeWizardsHQ is an online coding school for kids focused on offering the most fun and effective live, online coding classes for kids and teens ages 8-18. The classes are teacher-led, student-centered, and project-based. Unlike self-paced and video courses, CodeWizardsHQ has a structured and progressive curriculum with separate tracks tailored to elementary, middle, and high school students.

In response to current events, many schools have closed and kids are at home. Administrators and teachers are working around the clock to provide students with an education while also navigating their home life. To help both students and teachers during this trying time and to provide learning opportunities for students to be productively engaged, CodeWizardsHQ has temporarily lowered prices, added new daytime classes, and created personalized schedules that work for each family's current situation.

"Due to the growing number of school closings due to COVID-19 around the world, CodeWizardsHQ recognizes the critical need for students to have access to virtual education," said Jey Iyempandi, founder and CEO of CodeWizardsHQ. "It is our responsibility as a company to support continued learning on a global level." For current students, the classes are continuing uninterrupted and extra support is being given by offering free bonus classes and extra office hours during regular school hours that serve to reinforce coding skills.

For prospective students, CodewizardsHQ is offering various choices:

Kids, who are exploring online learning and coding, now have access to 1-hour coding concept classes in Python, JavaScript, HTML/CSS, and Scratch. CodeWizardsHQ is also opening 1-week mini-courses that run M-Th during school hours that explore topics that include: Thinking like a programmer, Data Types and Variables, and Functions and Conditionals.

To provide a complete and comprehensive learning experience, our full courses are now available at an accelerated pace. This means classes are completed in only three weeks instead of twelve.

Students can even take an online coding class with friends from school. For groups of four to six students interested in taking a full course in three weeks, we are offering a custom schedule option with special group pricing. Classes are available early in the day, mid-day or afternoons. This is a great opportunity for teachers, parent groups, and/or organizations that want to provide a fun and engaging programming education to groups of kids instead of individual students.

These online coding courses are available for Elementary, Middle, and High School students.
